- 9: Convert Failed
- 10: Error because another A-PDF Word to Word is running.

An example:

```
WordToPDF "c:\help.doc " "c:\output\help.pdf"
```

Batch Convert Mode

Select the option **Batch Convert Mode** and push the button **Next >**, a WORD TO PDF Batch Convert window will be opened.

Selecting Files

Clicking the **Add** icon  then will open the standard file browse and select window. From that window you can navigate to the folder and find the files you want to add to the list of files to be worked.

Alternatively, if you are using Windows Explorer to locate files, you have the convenience of being able to 'drag and drop' files into the document window.

A-PDF Word to PDF even allows you to select all files in a particular directory/folder by using the **Add Folder**  button! Adding a directory also supports sub-folders.

Each added file is displayed in the document list window. You can view any of the files in the window by 'double-clicking' them. That will open DOC files in your MS Word program.

You can click the **Remove** icon  to remove selected files in list or you can clear all Docs by clicking the **Clear** icon .

Convert to PDF And Save As

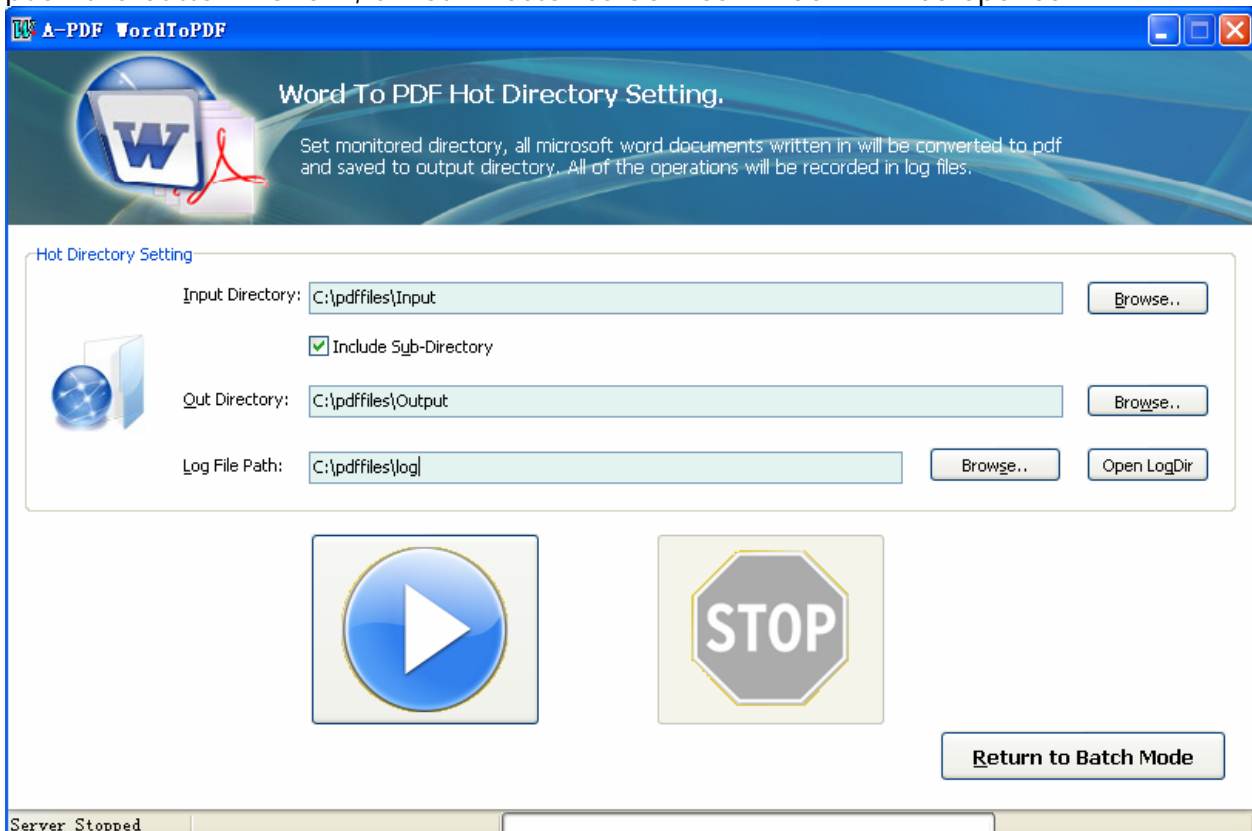

Click the **Convert to PDF And Save as** icon to convert all of Microsoft Word documents in the document windows to PDF and save the resultant file to a directory which you selected.

Hot Directories Mode

You may want to monitor a directory in a server, when some one copying the PPT files in, the files will be converted to PDF and sent to an output directory automatically.

In A-PDF PPT to PDF wizard window, select the option **Hot Directories Mode** and push the button **Next >**, a Hot Directories Service window will be opened.

Hot Directory Setting:

- **Monitor Directory**, set the directory to monitor. Even **Include Sub-Directory**.
- **Output Directory**, set output directory where all of converted files will be sent to.
- **Log File Directory**, Log files will be saved in. Log files will record the detail of operation. Such as when to monitor, which file converted, if converting successfully or not.

After setting the directories, click **Start** button to start work, **Stop** button to stop monitoring hot directory.

Output Settings

A-PDF Word To PDF allows you to undertake a number of special actions to apply to

your output document. Click the  icon.

This brings up a multi-tab list with options for accessing and changing your PDF document. You can edit the Properties, adjust Security settings (passwords, view/print permissions, etc.) in the document, Add Page Numbering to the Output document with complete control over where and how page numbering is displayed, as well as change the Output file's "view" layout.

Option – Properties

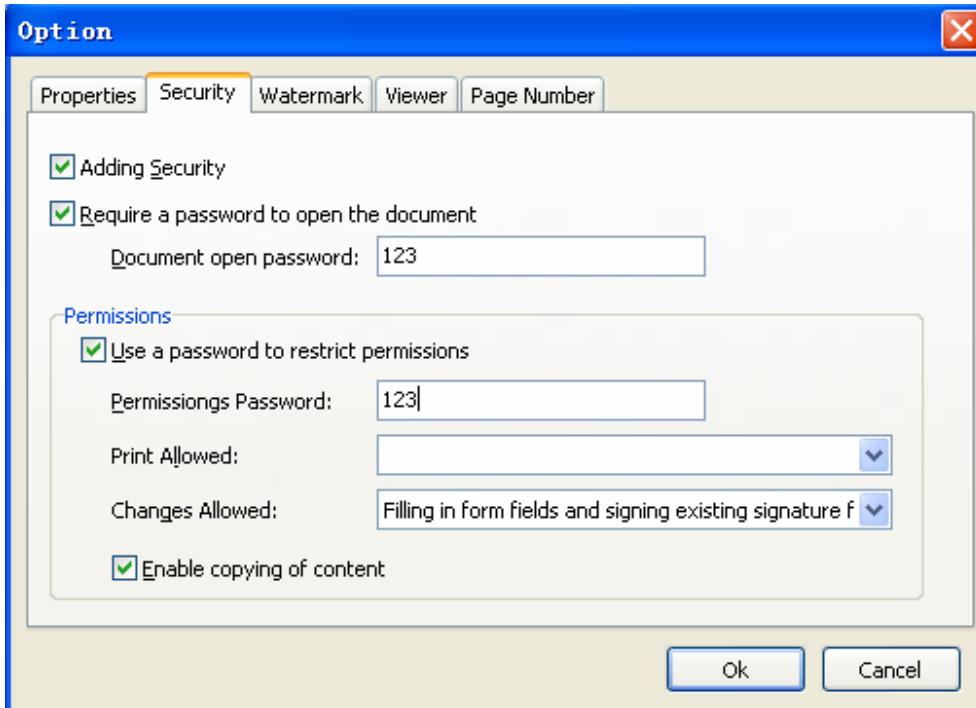

The Properties changer allows you to add/edit Title, Subject, Author, and Keywords for the Output PDF document.

A screenshot of a software dialog box titled "Option". It has a blue title bar with a close button (X) in the top right corner. Below the title bar are five tabs: "Properties", "Security", "Watermark", "Viewer", and "Page Number". The "Properties" tab is selected and highlighted. The main area of the dialog contains four text input fields, each with a label to its left: "Title:" with the text "title", "Subject" with "subject", "Author" with "chj", and "Keywords" with "cs". At the bottom right of the dialog are two buttons: "Ok" and "Cancel".

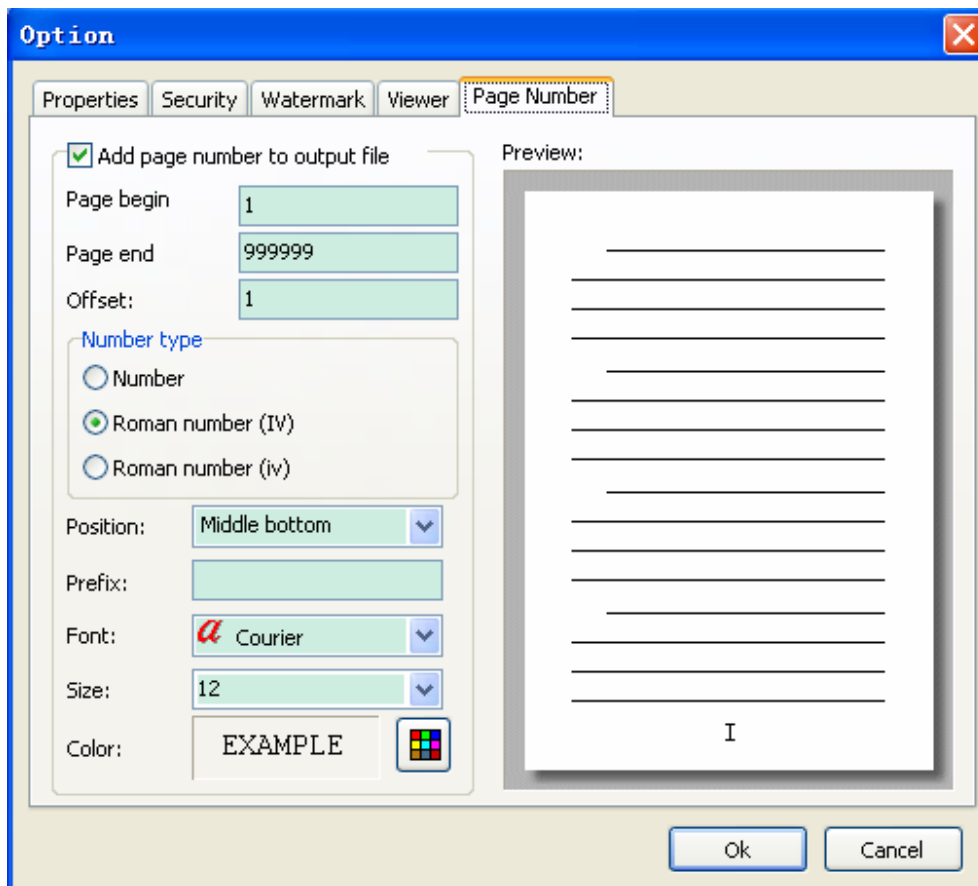

Option - Security

The Security options are self-guided and intuitively obvious making them very simple to use. In each case, check the uppermost checkbox to 'activate' the alternative selections on either tab.

Option - Page-Numbering

The page-numbering feature allows you to select how page numbering is added to output documents. Check the 'Add page number to output file' box, and you can make selections simply for your output document.

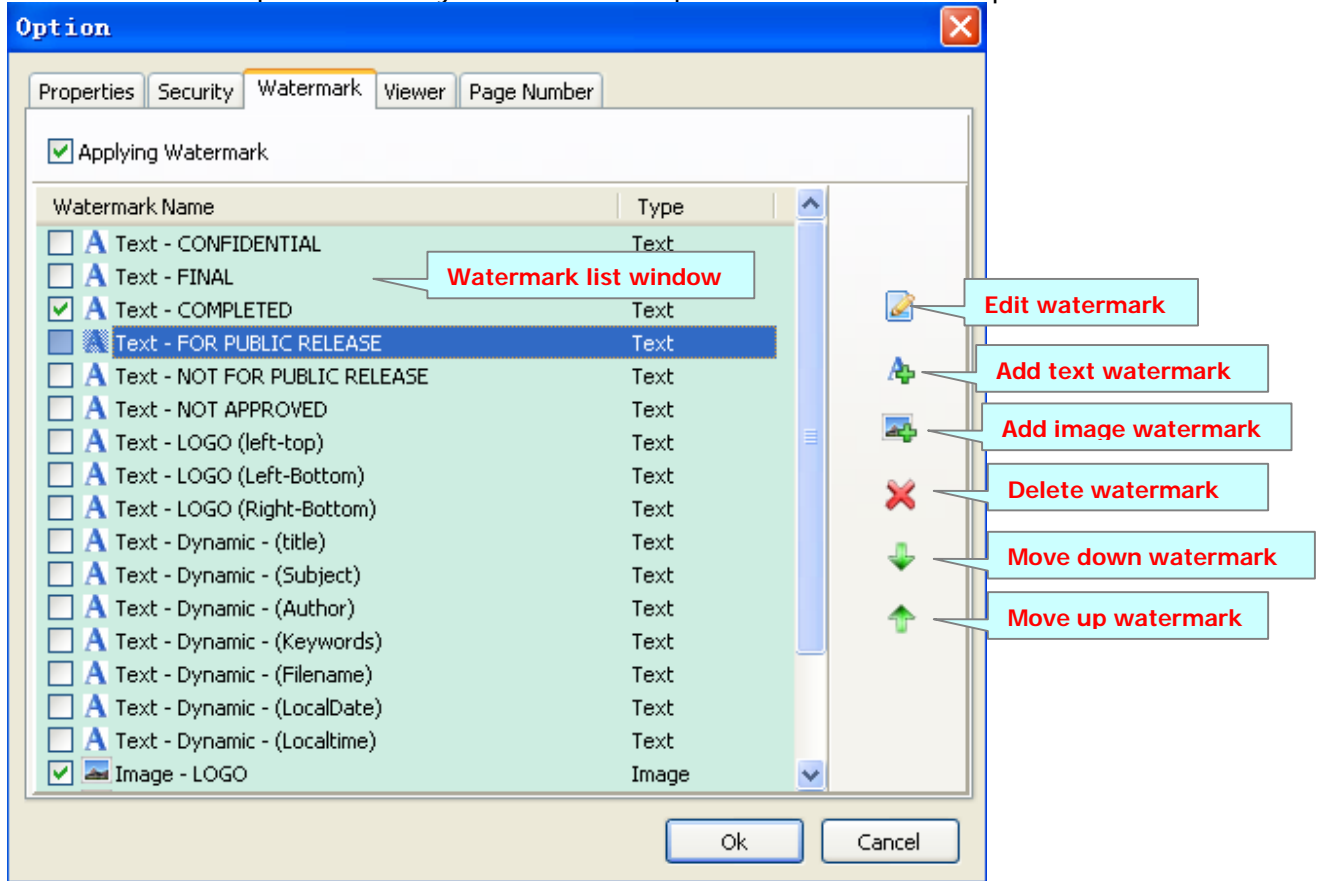

You can use any standard or .ttf font on your computer for displaying page numbers. The small live preview shows you how your selections will look before applying them. Truetype™ fonts will embed with your output PDF document.

Option - Watermark

The Watermark option allows you to add multiple watermarks to output documents

The watermarks for applying to PDF(s) are listed in the Watermark list, where you can find text and image Watermark items list in here, You can apply watermark by marking one or multiple Watermark items checked, The watermark items which checked will to be applied to Output PDF(s)

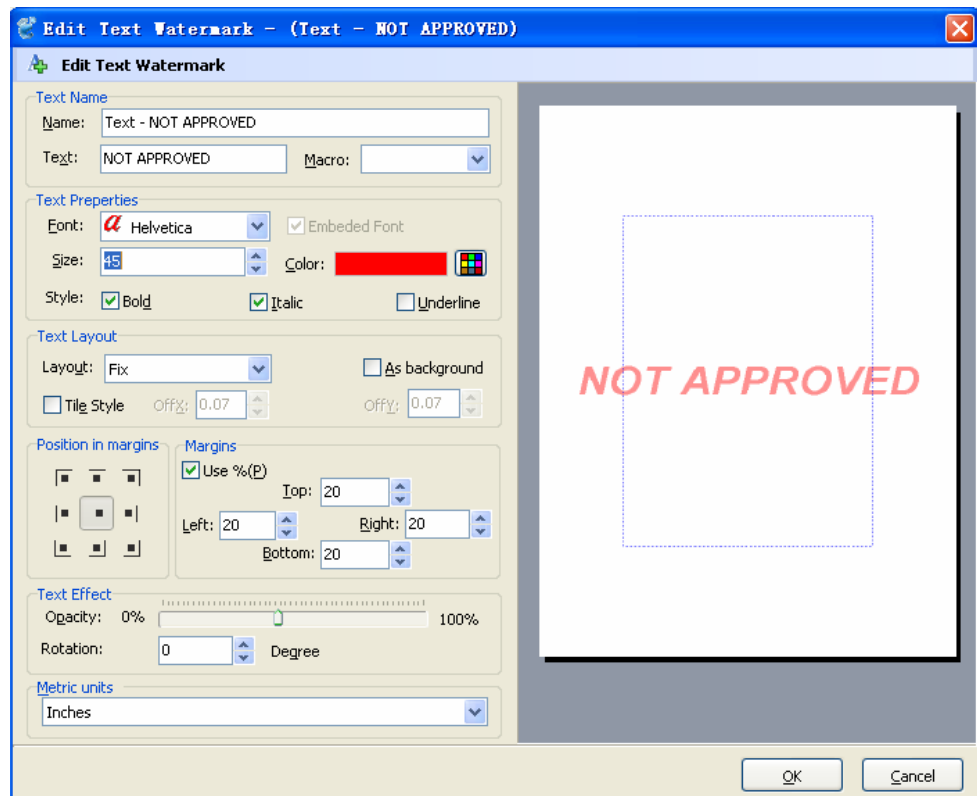

Create Text Watermark

In Watermark list window, Click the icon  to open the **New Text Watermark** configuration window. You can configure the text watermark properties here. Once you set the desired options for the text watermark, you can click OK to save it, Options that you can set:

Name - you can enter a name for the watermark (note this is not the text that will appear in the pdf, it's used only in the list of available watermarks that you see on the Watermarks list and must be a unique name).

Text - the text you enter here is actually the text that will appear as the PDF watermark. You can use macro to specify dynamic text, either select from the Macro list or input directly. As you type you will see in the Preview section how the watermark looks.

Text properties - You can select the type of the font (in the Font section), color, style (bold, italic, underline) and size of the text. If the font is true type, you have choice to embed the font or not.

Text Layout - If the Fit to margins options is selected the size of the font will be automatically adjusted to fit in the limits of the page margins. If the **As background** option is not checked, the text watermark will be placed on top of the content that currently exists in the document, otherwise it will be placed under the existing content. You can place the text to a fix position or tile in pages by check or uncheck **Tile style** option. **Offx** means x-offset, **Offy** means y-offset. **Position** and **Margin** helps you to adjust the position of text watermark. The margin can use either inch/millimeter or percent as unit.

Text Effect – you can choose a rotation angle if you want the text to be rotated (Rotation, values accepted between 0 and 360) and set an Opacity value so that the text is transparent (values from 0 to 100). 0 means invisible, 100 means visible solid.

Preview - in this section you will be able to see how the text watermark will be displayed in the PDF file.

Now the text watermark has been defined and saved, it will be shown in the **Watermarks list window**.

Create Image Watermark

In Watermark list window, click the icon  to open the **New Image Watermark** configuration window. In here you can configure the image watermark properties.

Once you set the desired options for the image watermark, you can click OK to save it, Options that you can set:

Name - you can enter a name for the image watermark.

Image - You can browse and choose an image that will be used as the watermark. Image formats that can be recognized: .BMP, .GIF, .ICO, .JPG, .TIF, .JPEG, .JPE, .PBM, .PCX, .PNG, .PPM, .PSD, .TGA, .TGA etc. After you click ok you will see it in the Preview section.

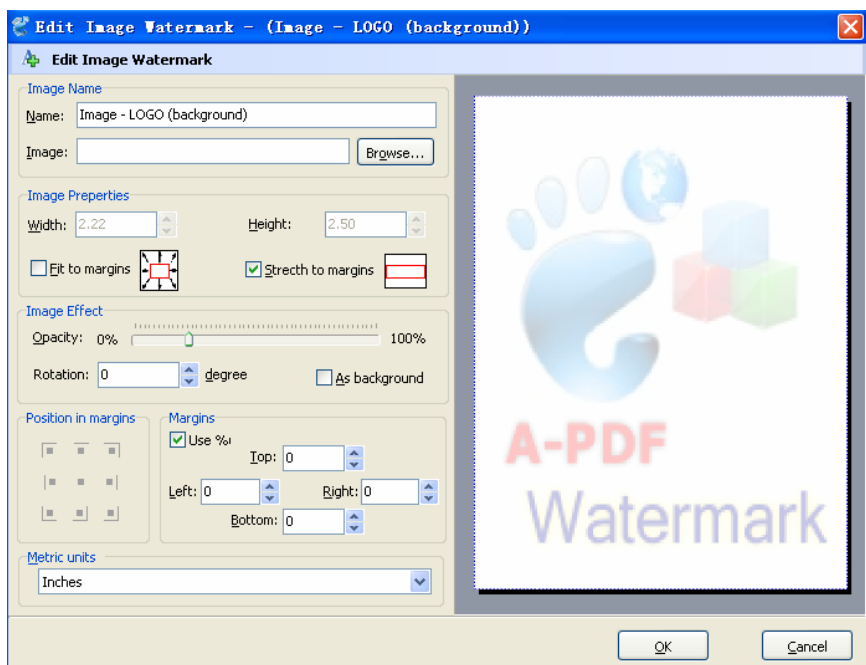

Image properties and margins - by default the **Fit to margin** are checked. The **Fit to margins** option will adjust automatically the image to fit in the limits of the page margins. If you uncheck the **Fit to margins** option you can enter custom dimensions for your image (units for the dimensions are those selected in the Units drop-down includes inches, millimeters or points) and the image will be automatically adjusted as seen in the Preview section. The **Stretch to margins** option will adjust automatically the image to stretch in the limits of the page margins

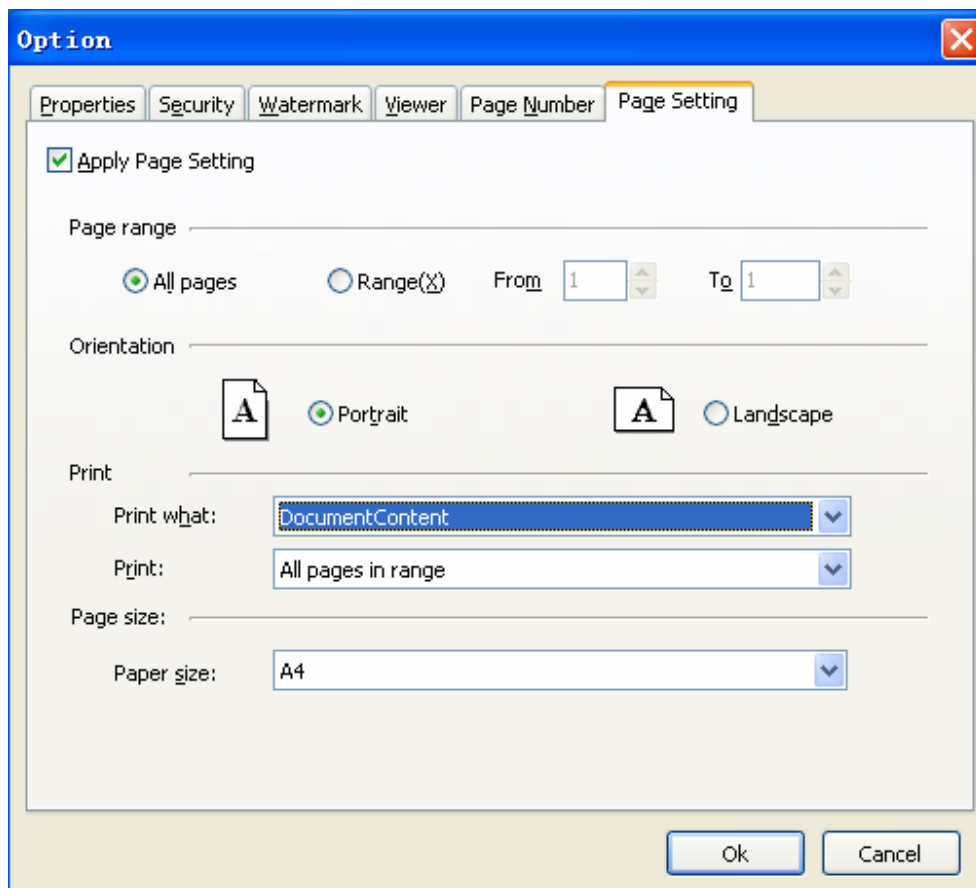

Image Effect - Using options in this section you can choose a rotation angle if you want the image to be rotated (Rotation, values accepted between 0 and 360) or set an Opacity value so that the image is not fully visible (values from 0 to 100).

Preview - in this section you will be able to see how the image watermark will be displayed in the PDF file.

Now the image watermark has been defined and saved. It will be shown in the **Watermarks list window**.

Option – Page Settings

The Page setting option allows you to set output PDF documents pages size, orientation, page layout, slide pages range for converting, etc...

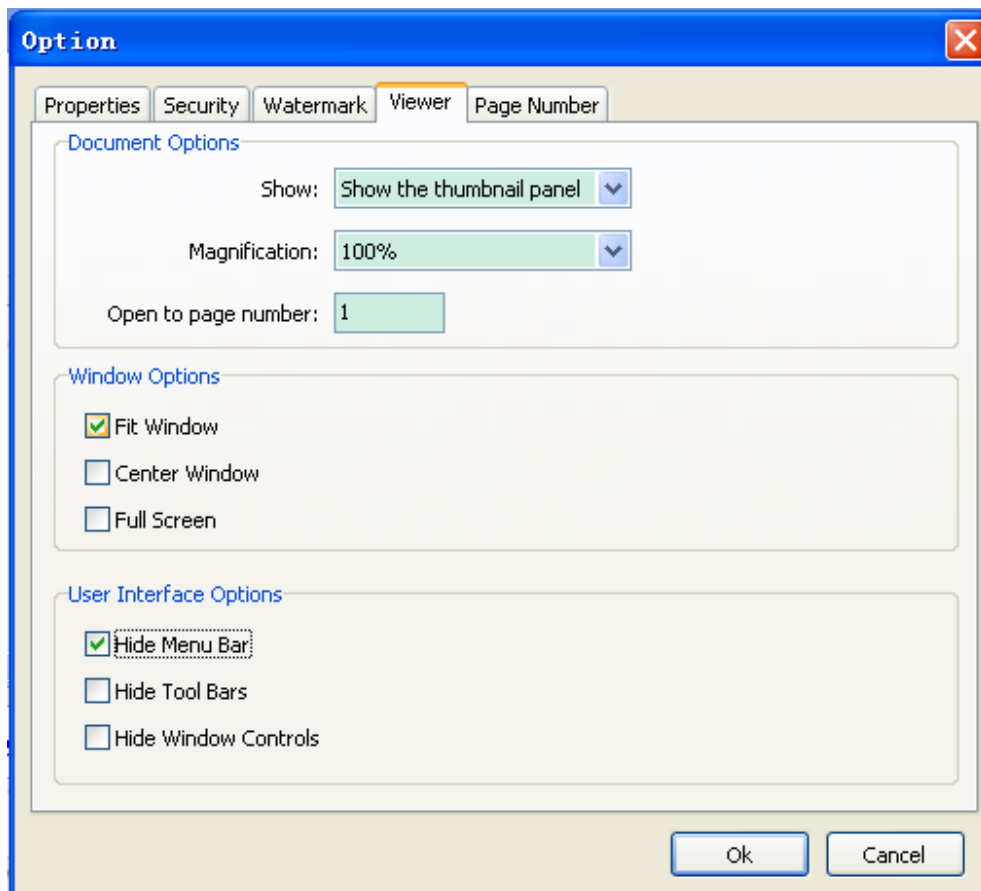

- **Page Range:** You can choose all pages, or select specific MS word pages to convert
- **Page Size** Select the formats the outputted paper size will be used for from the pages sized for drop-down list
- **Page Orientation:** to choose which pages to print and orientation - landscape or portrait.
- **The convert what area:** has Seven options in the drop-down list – include: Document Content, Properties, Comments, Styles, Auto Text Entries, Key Assignments, Envelope

Option - Viewer

The Viewer option allows you to set various parameters as the defaults to be used when your output pdf is viewed. Use the dropdowns to set the document options, and the checkboxes to choose window and interface options to completely customize how your output document first appears when opened.

Ending Your Session

When you have completed your work click the **Quit** icon to exit program.
